Description :

Human Sacrum and Coccyx-2 (Product Code: SLE/A/64) is an unmounted, life-size plastic replica of the sacral vertebrae together with the coccyx. With no stand attached, it can be picked up, turned over and laid flat on a tray, which suits hands-on bone identification and station-based practical exams. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, whose school and college lab equipment range includes a wide choice of skeletal models.

Specifications

Parameter	Detail
Structures	Sacral vertebrae with the coccyx
Scale	Life-size replica
Material	Plastic
Mounting	Unmounted
Size	20 x 11 x 6 cm

Typical Use

The sacrum forms when five sacral vertebrae fuse during development, and a loose replica is the easiest way to show students the traces of that fusion: the transverse ridges on the front surface, the rows of foramina and the median crest at the back. Because the piece is unmounted, examiners can place it at a practical station in any orientation and ask candidates to decide which side is anterior, which end is the base and where the coccyx articulates.

In zoology lab equipment collections it can be set beside animal skeletons to compare how the tail region is reduced in humans. Nursing and physiotherapy tutors also use it when discussing sitting posture, coccyx injuries and the location of sacral injection sites. The plastic surface can be wiped clean after each class, and the compact size allows several pieces to be stored in one drawer.

Manufacturer

This unmounted replica is produced by Jain Scientific Equipments Private Limited, known to customers as ScienceLab, which designs and supplies anatomy teaching aids from Ambala in Haryana. The company profile gives an overview of its work.

Related Human Models

To build a lower-spine practical station, consider adding:

- Human Sacrum and Coccyx — the one-part version of the same region, useful as a second specimen.
- Human Pelvis Structural Model With 5 Pcs Lumbar Vertebraes — places the sacrum within the pelvis and below the lumbar spine.
- Human Lumbar Spinal Column Model — the section of spine that rests on the sacrum
