Description :

Male Youth Torso without Head (Product Code: SLE/A/87) is a life-size torso of a young male that realistically depicts the anatomy of the neck, thorax and abdomen. Leaving out the head keeps the focus on the internal organs of the trunk, and the model separates into 8 parts so the lungs, heart, liver, stomach and intestines can be lifted out and examined. Among biology lab equipment in India, it is a straightforward choice for secondary school biology, health science and nursing foundation classes, made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**,Ambala.

Specifications

Parameter	Detail
Scale	Life size
Mounting	Mounted on a base
Overall size	39 x 26 x 73 cm H
Torso height	69 cm
Regions shown	Neck, thorax and abdomen
Separates into	8 parts
Removable organs include	Lungs, 2-piece heart, liver, stomach, small and large intestines

Typical Use

This torso is often the first model students meet when they study the organs of the body. A teacher can remove the lungs to reveal the 2-piece heart, open the heart to show its interior, and then take out the liver, stomach and intestines to explain the order in which food passes through the digestive tract. Putting the organs back in place is a useful exercise in itself, as it tests whether learners remember where each organ sits.

With 8 parts rather than dozens, it is quick to dismantle and reassemble within a single period, which suits busy school timetables. For schools looking at a basic biology lab setup in India, a headless torso like this covers the thoracic and abdominal organs at a manageable size, leaving head and brain topics to a separate model.

Manufacturer

Made in Ambala, Haryana by **Jain Scientific Equipments Private Limited**, a company that sells its teaching models and laboratory apparatus under the **ScienceLab** name. Visit our company profile to learn how the business is organised and what else it produces.
