Product Name :

Pear Shaped Flask with Two Neck

Product Code :

SLE/GFL/12

Description :

Pear Shaped Flask with Two Neck (Product Code: SLE/GFL/12) is a small borosilicate reaction flask with a 14/23 centre joint and a second neck set at 25° to the side. The centre neck typically carries a condenser while the angled side neck takes a thermometer, an addition funnel or a gas inlet, which makes the flask practical for microscale synthesis and small reflux or distillation runs in college and research chemistry labs. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Material	Borosilicate glass
Design	Pear shaped body with centre neck and one side neck
Side neck angle	25°
50 mL size	Centre joint 14/23; overall height 100 mm
100 mL size	Centre joint 14/23; overall height 100 mm
Side socket size	Not stated in the current listing — confirmed on enquiry
Resistance	Heat resistant and chemical resistant
Used in	Chemical laboratories

Typical Use

A common arrangement is to fit a reflux condenser to the 14/23 centre neck and use the side neck to monitor the reaction temperature or to add a reagent drop by drop while the mixture boils gently. Because the side neck leans out at 25°, the thermometer or funnel stays clear of the condenser and clamps above it. Pear-shaped flasks are generally preferred for small charges, as the tapered base keeps a few millilitres of liquid together instead of spreading it thinly over a wide bottom.

Pick the 50 mL flask for microscale student preparations and the 100 mL flask when a little more working volume is needed. Heat in a water or oil bath rather than over a direct flame, support the flask by the centre neck, and make sure the apparatus is always open to the air through the condenser — never heat a sealed system.

Manufacturer

Jain Scientific Equipments Private Limited makes this two-neck flask and markets it under the **ScienceLab** name. The company is located in Ambala, Haryana, and its glassware reaches teaching and research laboratories in India and international markets. See the company profile for more about us.
