Product Name :

Wash Bottle LDPE with Narrow Mouth

Product Code :

SLE/GBO/12

Email : sales@scilabexport.com
Phone: +91-7082934803

Description :

The **Wash Bottle LDPE with Narrow Mouth** (Product Code: SLE/GBO/12) is a transparent, low-density polyethylene bottle with a screw cap, used to deliver a controlled stream of distilled water or rinse solution when washing glassware, transferring precipitates or making a solution up to the mark. LDPE is soft and flexible, so a gentle squeeze of the body is enough to dispense the liquid, and the narrow mouth keeps refilling tidy. It is made by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, for hospital and laboratory use, and is a regular item for institutionsbuying from a lab plastic ware supplier in India.

Specifications

Parameter	Detail
Material	LDPE (low-density polyethylene)
Mouth	Narrow mouth
Cap type	Screw cap
Colour	Transparent
Chemical resistance	Chemical resistant
Capacities	250 ml, 500 ml
Usage	Hospital and laboratory

Typical Use

During a titration, a short squeeze washes titrant from the inner wall of the conical flask back into the solution so that none is left unreacted. Before a burette or pipette is filled, the wash bottle rinses it with distilled water; during filtration it carries the last particles of a precipitate from the beaker onto the filter paper. In hospital and clinical settings the same bottle is used for rinsing and routine cleaning tasks at the bench. The 250 ml size is easy to handle at an individual student place, while the 500 ml size needs refilling less often on a shared bench.

Keep a separate, clearly labelled bottle for each liquid — distilled water, ethanol or a specific rinse solution — and never top one up with a different liquid. Refill with fresh distilled water regularly rather than letting water stand for weeks. LDPE is not meant for heating, so keep the bottle away from hot plates and burner flames. Wash bottles are a basic part of chemistry lab equipment for schools in India, and most labs keep several in reserve.

Manufacturer

This bottle comes from Jain Scientific Equipments Private Limited, the Ambala, Haryana manufacturer that trades as ScienceLab. Alongside its glass bottles, the company offers plastic labware for schools, colleges, hospitals and laboratories in India and international markets. Read more on the company profile.
