Description :

Human Foot Model Set (Product Code: SLE/A/107) contains 3 life-size models representing cross sections of a normal, a flat and an arched human foot, supplied with a key. Unlike a general human body model kit, this set focuses on one clear comparison: how the shape of the foot's arch changes the structure of the foot. It is used in physiotherapy, podiatry, sports science and biology teaching, and is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala.

Specifications

Parameter	Detail
Type	Set of cross-section models of the human foot
Models in set	3 — normal foot, flat foot and arched foot
Scale	Life size
Size	22 x 12 x 8 cm (each model)
Key	Included

Typical Use

Lined up side by side in the same orientation, the three sections let students see at once how a flat foot and an arched foot differ from a normal one. Teachers use the comparison to explainwhat the arch does, spreading body weight and absorbing impact during walking and running, and why a collapsed or exaggerated arch can lead to discomfort in the feet, knees or back.

Physiotherapy, podiatry and orthotics students use the set when learning to assess foot posture, sports-science courses use it in lessons on gait and footwear, and schools use it in health education sessions on posture and choosing suitable shoes. Because each model is life size, learners can compare the sections directly with their own feet. Keep the key with the set so every structure can be named during practicals.

Manufacturer

This foot set is manufactured by **Jain Scientific Equipments Private Limited**. Operating as **ScienceLab** out of Ambala, Haryana, the company builds and supplies anatomy models and laboratory equipment for education buyers throughout India and international markets. Details are on the company profile.

Related Human Models

Models that extend a lesson on the foot and lower limb:

- Human Skeletal Foot Model — shows the bones that form the arches
- Human Foot Set Model — an alternative foot set for comparison
- Human Leg and Portion of Pelvis Model — places the foot within the whole lower limb
- Human Knee Joint Model, Life Size — for discussing how foot posture affects the knee
- Human Elbow Cross Section Model — another life-size section for a sectional anatomy
