Description :

The **3B Human Development Set** (Product Code: SLE/A/134) is a series of uterus models that follows pregnancy from the early embryo to a well-formed fetus, with the embryo or fetus liftingout of each uterus for closer study. It is used in embryology, reproductive biology, midwifery and nursing teaching, and works well as a human development model set for colleges buying biology lab equipment in India. The set is supplied by **Jain Scientific Equipments Pvt Ltd (ScienceLab)** , Ambala.

Specifications

Parameter	Detail
Uterus models	Eight models of the uterus
Embryo stages	Removable embryo in the 1st, 2nd and 3rd months
Fetus stages	Removable fetus in the 5th and 7th months
5th-month models	Four models showing twins as well as a fetus in various positions
Mounting	Each model mounted on a base

Typical Use

Laid out in order on a bench, the models let students compare how the embryo grows through the first three months and how the fetus fills the uterus by the 5th and 7th months. Lifting each embryo or fetus out of its uterus makes the relationship between the developing baby and the uterine wall easy to discuss, and the 5th-month models open up topics such as twin pregnancy and fetal position that are central to obstetric and midwifery training.

Tutors often rotate small groups through the set during practical sessions, asking each group to identify the stage and describe the changes they see. Institutions equipping several teaching rooms can combine it with other pregnancy and pelvis models in a single biology model kit bulk order.

Supplier

The set reaches customers through **Jain Scientific Equipments Private Limited**, the Ambala, Haryana company behind the **ScienceLab** brand, which supplies anatomy models to schools, medical and nursing colleges and distributors. More about the company is on our company profile.

Related Human Models

Models that are commonly taught alongside this development set:

- Human Placenta Model — shows how the placenta and umbilical cord support the fetus
- Human Birth Demonstration Model — continues the story from late pregnancy to delivery through the pelvis
- Human Adult Female Pelvis Structural Model — explains the bony birth canal the fetus must pass through
-
- riod
