Description :

Human Stomach Model (Product Code: SLE/A/149) is a life-size stomach that is dissectible into 2 parts, letting students examine both the external shape of the organ and its internal anatomy on the same model. A numbered key is included for identifying the structures. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, an anatomical models manufacturer, for school biology classrooms, nursing and medical colleges, and dietetics training, and fits easily into a human biology model set on the digestive system.

Specifications

Parameter	Detail
Scale	Life size
Size	19 x 18 x 34 cm
Construction	Dissectible into 2 parts
Anatomy shown	Internal and external anatomy of the human stomach
Key	Numbered key included

Typical Use

A typical lesson starts with the closed model: students trace where food enters from the esophagus and where it leaves towards the duodenum, and note the curved shape that lets the stomach expand after a meal. Opening the 2 parts then reveals the internal anatomy, which the class identifies using the numbered key. This sequence supports explanations of how the stomach stores food, mixes it with gastric juice and releases it gradually into the small intestine.

Being life size, the model gives a realistic sense of how large the stomach actually is, which is useful in nutrition and dietetics classes as well as in anatomy. Reassemble the two halves after each session so the joining edges are not chipped, and keep the key with the model.

Manufacturer

Our stomach model is produced by **Jain Scientific Equipments Private Limited**, the Ambala-based company in Haryana, India, that markets its teaching models and lab apparatus as **ScienceLab**. Find out more about the company on our profile page.

Related Digestive System Models

Other models used in the same digestion lessons:

- Stomach Model 2 Part — shows the individual layers of the stomach wall, with a removable front half
- Human Stomach, on Stand — a stand-mounted stomach model for display
- Gastric Band Model — adds a surgical treatment topic to stomach anatomy
- Digestive System Model 2 part — places the stomach within the whole digestive tract
