Description :

Human Liver and Gallbladder Model (Product Code: SLE/A/153) is a one-part, dissected model enlarged to 1-1/2x life size, showing the internal anatomy of the human liver together with its gallbladder. The enlargement makes internal detail easier to point out to a group, and anumbered key is included. It is manufactured by **Jain Scientific Equipments Pvt Ltd (ScienceLab)**, Ambala, for anatomy and physiology teaching in schools, nursing colleges andmedical institutions, and is a useful piece among biology teaching aids in India for the digestivesystem.

Specifications

Parameter	Detail
Scale	1-1/2x life size, enlarged
Size	19 x 26 x 29 cm
Construction	One-part, dissected model
Anatomy shown	Internal anatomy of the human liver with gallbladder
Key	Numbered key included

Typical Use

The liver is large and solid, so its interior is hard to picture from outside views alone. Because this model is already dissected, the internal anatomy is visible the moment it is placed on the bench, with no parts to remove. Teachers use it to explain the liver's role in producing bile, the gallbladder's role in storing it, and how both connect to digestion of fats. Students then work through the numbered key to name each marked structure.

The one-part build suits frequent handling by younger classes, and the enlarged scale helps at the back of a lecture room. Pairing it with a liver pathology model turns a single lesson into a normal-versus-disease comparison. Clean it with a soft dry cloth and keep it away from heat sources.

Manufacturer

Manufactured by **Jain Scientific Equipments Private Limited**, which trades as **ScienceLab** from Ambala, Haryana, and produces anatomy models and teaching apparatus for institutions in India and international markets. Details about the company are on our company profile.

Related Digestive System Models

Models that fit into the same liver and biliary lessons:

- Human Liver Pathology Model — life-size liver and gallbladder showing common pathologies, for comparison
- Human Liver With Gall Bladder Model — an alternative liver and gall bladder model
- Rear Organs of the Upper Abdomen — shows the opened bile ducts, duodenum and pancreas that connect to the gallbladder
